Sigma Set

The Sigma set consists of a waistcoat and a coverall with integrated hand protection. The Sigma set is designed with functionality, comfort and optimum protection in mind.

Gamma Set

The Delta set consists of dungarees and a jacket with integrated hand protection, so that the set offers excellent comfort.

Delta Set

The Delta set consists of trousers, a waistcoat and gloves, so that the set offers excellent comfort.

Jacket with Integrated Hand Protection

The jacket offers effective protection for the front, neck and shoulders. It is also equipped with hand protection. For optimum protection, the jacket can be combined with combined with trousers and HFH gaiters.

Vest

The waistcoat offers effective protection and optimum comfort. Velcro fasteners at the waist and back allow for different size adjustments.

Dungarees

The front of the dungarees is covered with a protective fabric up to the waist. The zips on the outside of the legs are protected by a Velcro cover.

There are also wide, adjustable shoulder straps with elasticated straps at the back, an elasticated section at the back of the waist and adjustable straps at the sides for maximum comfort and an optimum fit.

A high degree of freedom of movement (climbing, crawling) is guaranteed.

It is often used in combination with the waistcoat or jacket, hand protection, gaiters or boots 3000.

Overall with Hand Protection

The overall provides protection against water jet injuries on the front of the legs, as well as the forearms and hands of the wearer. A neoprene collar seals around the neck, while maintaining maximum freedom of movement. Additionally, the overall can be equipped with ventilation.

An ideal combination with a vest for upper body protection, gaiters or boots 3000 for foot protection, or the balaclava for added comfort.

Hand Guard

The hand guard protects both the hand and the forearm. A thumb strap keeps it in the right place. The hand guard is easy to put on and is available for the left and right hand.

It is often used together with a waistcoat or apron.

Protective Apron

The apron's entire surface is provided with a woven range of protection. Putting on and taking off the apron is simple. Due to the adjustable shoulder strap, the apron's position can be adjusted to individual needs. Furthermore, there is an adjustable strap in the waist area increasing comfort by relieving weight of the shoulder section.

TST Protective Apron is often used in combination with hand guards, gaiters or boots 3,000.

Protective Gloves Prooperator

The Prooperator protective glove is characterised not only by its waterproofness, but also by its granulated surface. It is made from high-strength Dyneema fabric soaked in nitrile rubber.

Gaiters

The gaiters are worn over normal safety shoes. To prevent them from slipping, they have three clips and a Velcro fastener at the back, as well as an adjustable sole strap. The gaiters are characterised by a high level of comfort and distinct convenience.

Head Protection

The head protection consists of a helmet with a visor and ear protection. All the components are tested and certified for water-jet protection with a pressure of up to 3,000 bar (according to 89/686/EEC). The helmet additionally fulfills requirements according to EN 397:2012 for industrial safety helmets.
